User	How Might We...
Young professionals who frequently dine out with friends	...make group dining coordination easier through shared lists, live updates, or social recommendations?
People with food allergies or dietary restrictions	...help users instantly filter restaurants based on their

	specific allergies or dietary needs?
Older adults who prefer hygienic, quiet, and reliable places	...highlight and verify clean, senior-friendly, and low-noise restaurants?
Budget-conscious college students	...offer transparent, crowd-rated pricing info and rewards for affordable, quality dining?
Busy parents looking for family-friendly dining options	...recommend safe, quick-service restaurants with features for kids and families?
Frequent travelers exploring unfamiliar cities	...enable trustworthy, socially verified discovery in new cities without falling for tourist traps?
Social media users and food bloggers	...integrate visually rich experiences and boost peer recognition for top contributors?
Health-conscious diners	...offer nutrition-aware recommendations and track users' health-based dining history?
People trying new cuisines or experimenting with food	...create adaptive suggestion engines that evolve with user tastes and culinary interests?
